JML WIN OJEC TENDER

JML Software Solutions Ltd are delighted to announce that they are the provider of choice for the European Tender T1203/09. The tender was for the purchase and installation of an integrated Firearms and Weapons Armoury Management System which JML won with their market leading Chronicle Firearms and Armoury modules.

“We are delighted that all our hard work in developing and continually improving our Firearms and Armoury modules has paid off with this tender win’ stated JML CEO Luis Ponte. ‘We look forward to the challenges that lie ahead in delivering the solution which when complete will standardise working practices and link seven armouries with officer training records. The benefits in terms of efficiency savings and audits will be substantial for our partner force”

The system will manage the operational and occupational competencies of all officers involved in firearms as well as manage access to the seven armouries and the weapons they hold. A series of e-mail or SMS notifications informs officers if they are about to lose their authority due to an expiring skill or for critical events such as unauthorised officers attempting access to an armoury. As well as officers’ competency portfolios, the system will also produce the force operational STRA in relation to firearms to ensure that the force can make best use of their firearms resources and target them to where they are most needed.

Luis Ponte added, “When deployed, this will be the first end to end solution of its kind in the country if not the world. We have worked tirelessly with our customer base and the NPIA to ensure that our modules keep pace with the fast changing face of modern policing and the demands and challenges that it brings and we will continue and develop these relationships further in the future to ensure our products develop according to our customers’ needs.”

To find out more about this or any of JMLs products, please contact Luis Ponte or Philip Moorcroft on the details below.
